PROFESSIONAL SUMMARY

Frontend Developer with strong hands-on experience in **React.js, TypeScript, and Material UI**, specialising in building **data-driven, high-performance web applications**. Experienced in developing **advanced grid components**, reusable UI wrappers, and **performance-optimised dashboards** for large datasets. Skilled in API integration, strongly typed frontend architectures, and translating Figma designs into **pixel-perfect, responsive UIs**. Passionate about scalable UI systems and modern manufacturing SaaS platforms.

TECHNICAL SKILLS

Core Frontend

- React.js (Hooks, Functional Components)
- TypeScript (Strong typing, Interfaces, Generics)
- JavaScript (ES6+)
- Material UI (MUI)

Advanced UI & Components

- Material React Table
- AG Grid (basic exposure)
- Metadata-driven grid architectures
- Conditional rendering & styling
- Reusable component libraries

State Management

- React Hooks
- Context API
- Redux (basic understanding)

Styling & Layout

- CSS3
- Responsive Design

- Conditional & dynamic styling
- MUI theming

API & Data Handling

- REST API integration
- Handling nested & complex JSON data
- Type-safe data models and interfaces

Performance Optimisation

- Virtualisation for large datasets
- Memoisation (`useMemo`, `useCallback`)
- Avoiding unnecessary re-renders

Additional Skills

- JWT-based authentication UI handling
- Role-based UI access
- Git & version control
- Debugging TypeScript-heavy applications

PROJECT EXPERIENCE

Manufacturing Operations Dashboard

React.js | TypeScript | Material UI

- Developed a **high-performance dashboard** for manufacturing data visualisation using React and TypeScript.
- Built **advanced, metadata-driven grid components** using Material React Table with:
 - Hover and click-based styling
 - Conditional cell rendering
 - Custom column configurations
- Integrated backend REST APIs with **strongly typed interfaces** to handle deeply nested data structures.
- Implemented **virtualised rendering** to efficiently handle large datasets without UI lag.
- Created reusable wrapper components to ensure consistency across the application.
- Applied memoisation techniques to significantly reduce re-rendering and improve performance.

Role-Based SaaS Admin Panel

React.js | TypeScript | MUI | JWT

- Designed and implemented **authentication-aware UI states** using JWT sessions.
 - Built role-based conditional navigation and component visibility.
 - Converted Figma designs into **pixel-perfect, responsive layouts** using MUI.
 - Ensured clean, modular, and well-documented code following best practices.
-

Analytics & Charts Module

React.js | TypeScript | Chart.js

- Integrated charting libraries to display real-time and historical data.
 - Implemented reusable chart components with configurable props.
 - Optimised chart rendering performance for dynamic datasets.
-

INTERNSHIP / PRACTICAL EXPERIENCE

Frontend Development Intern (Project-Based)

- Collaborated with backend developers to integrate APIs efficiently.
 - Worked closely with designers to translate UI mockups into production-ready components.
 - Followed clean coding standards with emphasis on reusability and maintainability.
 - Participated in debugging and performance tuning of TypeScript-based applications.
-

EDUCATION

Bachelor's Degree in Computer Science / Information Technology

[Your College Name], India

[Year of Graduation]

KEY STRENGTHS

- Strong problem-solving mindset
 - Deep understanding of TypeScript type safety
 - Performance-focused UI development
 - Clean, modular, and scalable code
 - Quick learner with passion for SaaS and smart manufacturing systems
-

AVAILABILITY

- Available for **Frontend Developer Internship**
- Open to full-time conversion based on performance
